

Future Interns – Data Science & Analytics Task 3

College Event Feedback Analysis

Objective: Analyze student ratings and written comments to understand satisfaction, sentiment, recurring themes, and improvement opportunities.

Dataset: 80 simulated responses across 8 college events. This is a demonstration dataset; real Google Forms responses should be substituted before making institutional decisions.

1. Data Cleaning

The dataset contains Student ID, Event, Department, Year, Rating (1–5), and Comment. Text fields were cleaned, duplicates checked, ratings converted to numeric form, and invalid ratings excluded.

2. Rating Analysis

The overall average rating is **4.09/5** across **80** responses.

3. Sentiment Analysis

Positive: 54 responses (67.5%)

Neutral: 19 responses (23.8%)

Negative: 7 responses (8.8%)

Student Feedback Sentiment Distribution

4. Department Analysis

Department	Responses	Average Rating
Arts & Humanities	10	4.40
Career Development	10	4.20
Mechanical	10	4.10
Physical Education	10	4.10
Management	10	4.00
Media	10	4.00
Computer Science	20	3.95

5. Recommendations

- Streamline registration and scheduling.
- Increase Q&A;, demonstrations, and hands-on activities.
- Review seating, sound, lighting, water, and equipment facilities.
- Use registration limits or multiple sessions for crowded events.
- Keep consistent 1–5 ratings plus an open-ended comment field.
- Track the same metrics across future events.

6. Conclusion

The project demonstrates a reusable workflow covering data preparation, rating analysis, visualization, NLP sentiment analysis, feedback themes, and actionable recommendations.
